

WALK & SEE

"Nest box-safari" and local biodiversity initiatives

Lundbeck aims to boost biodiversity by initiating a number of local initiatives at site Valby. In this flyer you can get an overview.

Bring a colleague on a "Nest box-safari" to locate nest boxes and identify different species of birds. Simply use the color codes on the map on the backside.

You can also discover and enjoy one of the many locations at the site where insect hotels, wild flower beds and beehive have been placed.

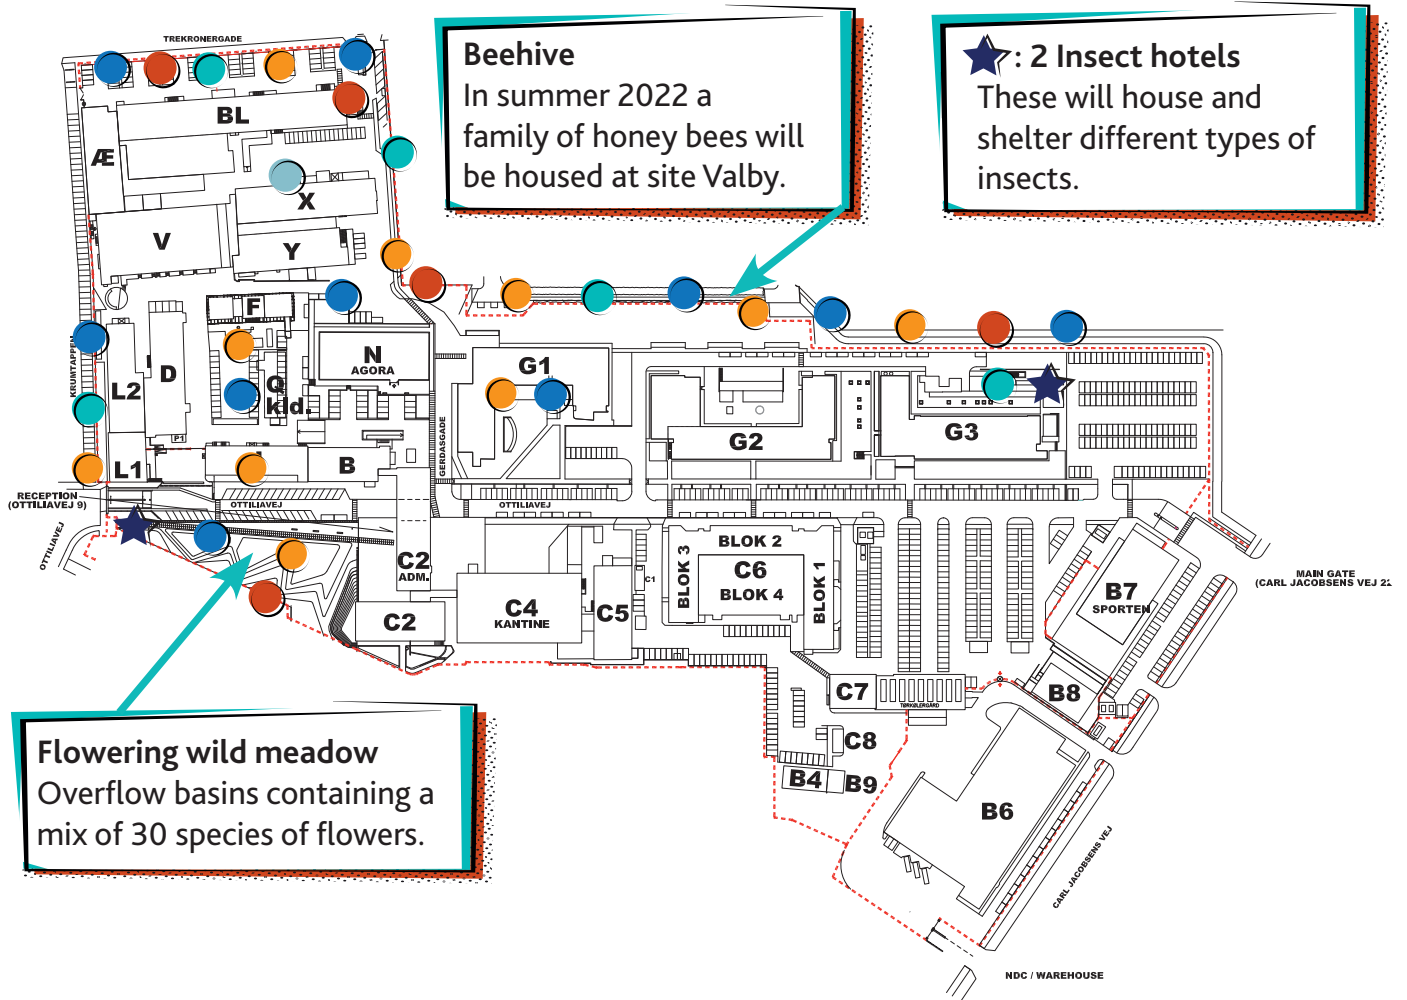

Biodiversity

Biodiversity – the diversity of all flora and fauna, plays a critical role in battling diseases, climate change and natural disasters.

However, biodiversity has been declining at an alarming rate. Two-thirds of the world's wildlife population has been lost within the past 50 years primarily due to human exploitation of land, and natural resources, pollution, and climate change.

This decline will affect us in many ways. We need healthy ecosystems and high biodiversity to sustain clean air, fresh water, rich soil and the pollination of crops.

Color	Description	Location	Species
	Colony of high hanging nest boxes	6 meters up	Tree sparrow (Skovspurv)  Starling (Stær) 
	Nest box with flat roof for smaller tits	2 meters up	Blue tit (Blåmejse)  Marsh tit (Sumpmejse) 
	Nest box with tilted roof for bigger tits	2 meters up	Great tit (Musvit)  Nuthatch (Spætmejse) 
	Open high hanging nest box	3 meters up	Flycatcher (Fluesnapper)  Redstart (Rødstjert) 
	Open low hanging nest box	1 meter up	Robin (Rødhals)
